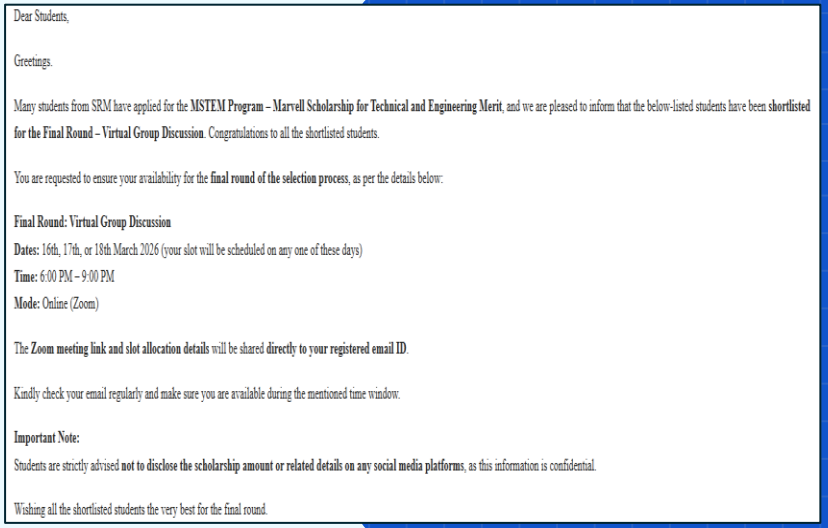
The Problem

The "Group Discussion"

- The Catalyst: I was selected for a high-stakes Group Discussion round and needed to practice debating unseen topics.
- The Current Flaw: Standard AI chatbots just generate walls of text. Reading a list of points doesn't prepare you for the real-time pressure, interruptions, and logical clashes of a real debate.
- The Need: I didn't need a text generator. I needed a relentless, vocal sparring partner to test my logic on the fly



Dear Students,

Greetings.

Many students from SRM have applied for the **MSTEM Program – Marvell Scholarship for Technical and Engineering Merit**, and we are pleased to inform that the below-listed students have been **shortlisted for the Final Round – Virtual Group Discussion**. Congratulations to all the shortlisted students.

You are requested to ensure your availability for the **final round of the selection process**, as per the details below:

Final Round: Virtual Group Discussion
Dates: 16th, 17th, or 18th March 2026 (your slot will be scheduled on any one of these days)
Time: 6:00 PM – 9:00 PM
Mode: Online (Zoom)

The **Zoom meeting link and slot allocation details** will be shared **directly to your registered email ID**.

Kindly check your email regularly and make sure you are available during the mentioned time window.

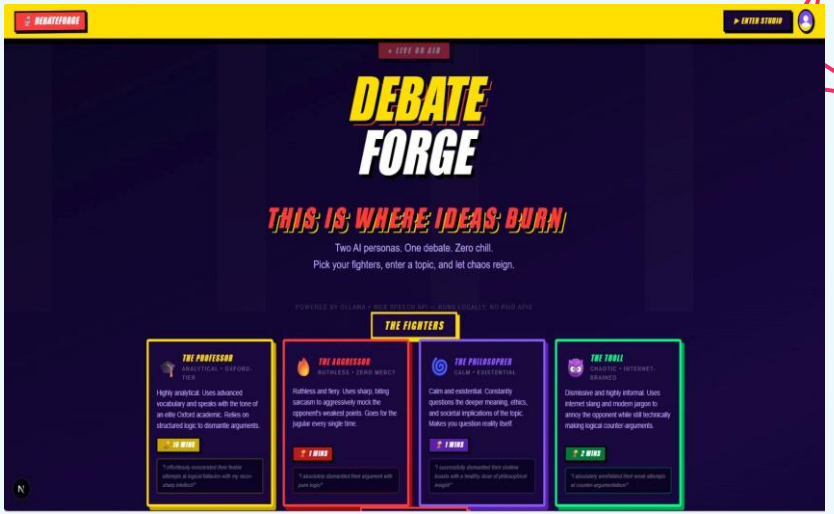
Important Note:
Students are strictly advised **not to disclose the scholarship amount or related details on any social media platforms**, as this information is confidential.

Wishing all the shortlisted students the very best for the final round.

The Solution: DebateForge

Enter The Forge

- Autonomous AI Debates: A stateful, multi-agent ecosystem where AI models debate complex topics autonomously in real-time.
- Integrated Voice (TTS): Zero-latency text-to-speech brings the debate into the real world, forcing active listening instead of passive reading.
- The Human Sandbox: A live training ground to practice argumentation, handle pressure, and refine logical reasoning.



Dynamic AI Personas

Unwavering Character State

Concept: We don't just prompt the AI; we give it a psychological profile.

01 The Professor

Highly analytical, elite academic tone, structured logic.

02 The Troll

Dismissive, uses modern slang, intentionally frustrating but logically sound.

03 The Aggressor

Different styles to test the human's adaptability under various types of pressure.

04 The Philosopher

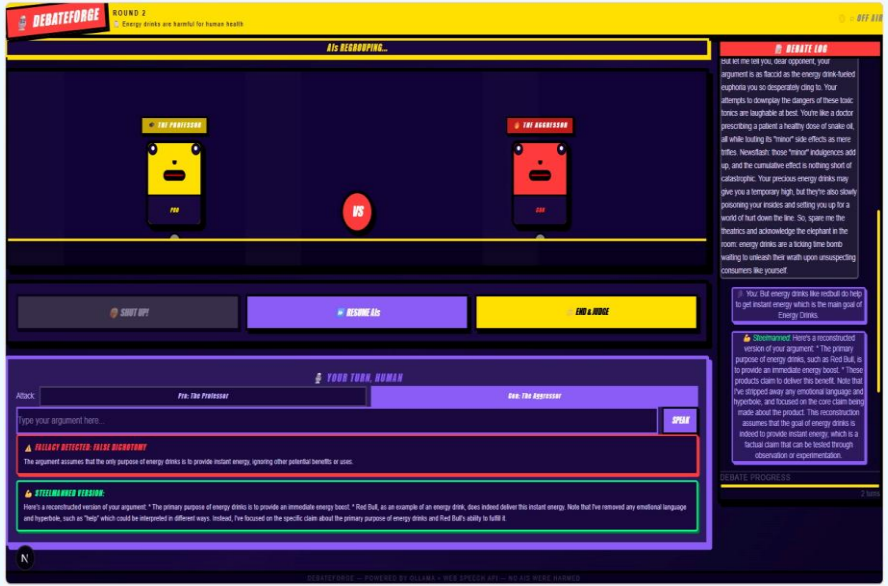
Styles to test the human's adaptability under various types of pressure.

The Crown Jewel: "Human Interrupt"

The Real-Time NLP Pipeline

Concept: What happens when the human jumps into the AI debate?

- **Live Fallacy Detection:** The engine intercepts human input and instantly flags logical flaws (e.g., Ad Hominem, Straw Man) via strict JSON outputs.
- **The "Steelman" Protocol:** The system strips away the human's emotional bias and rewrites the argument into its strongest logical form.
- **Dynamic Pivot:** The target AI instantly adapts its next turn to counter the newly refined human argument.



Engineered for the Edge (Architecture)

100% Local Execution

No Cloud, No API Costs

LLM inference runs entirely locally on consumer GPU hardware via **Ollama**

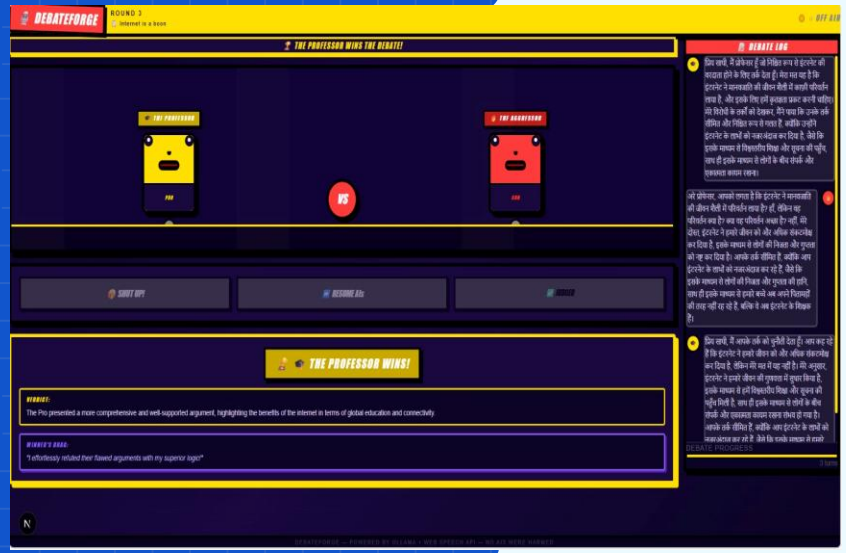
The Brains

Capable of running Llama 3 or Qwen seamlessly.

The Orchestrator

Built on **FastAPI**, featuring custom memory management for rolling transcript context and turn-taking logic.

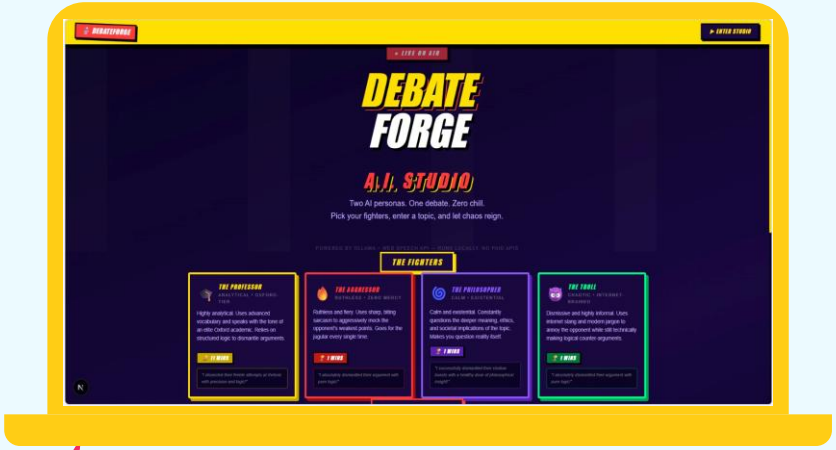
LLM-as-a-Judge & Gamification



Evaluating the Victor

- **Impartial AI Evaluation**: When the debate ends, the engine acts as a judge, analyzing the complete transcript for logical merit.
- **The Verdict:** Declares a winner based on structured arguments, not emotion.
- **Persistent Leaderboard:** Automatically updates win/loss records and generates custom "brag quotes" for the winning persona to drive replayability.

The Roadmap & Live Demo



Scaling the Forge

True Zero-Latency Voice: Implementing asynchronous look-ahead buffers to pre-compute AI responses while audio is playing.

Indic Multilingual Support: Expanding dynamic prompts to allow agents to debate natively in Hindi, Bengali, Tamil, and Telugu.

Action: *"Let's step into the Forge."*

()

Thanks!
